

MAUGOST OKORE

Senior Software Engineer · Engineering Lead · Fullstack & AI Integration Specialist

ammaugost@gmail.com | +234-814-373-3836 | Nigeria (Remote-First)

Portfolio: mtellect.github.io | GitHub: github.com/mtellect

PROFESSIONAL SUMMARY

Senior Software Engineer and Engineering Lead with 12+ years of experience spanning mobile, backend, fullstack, and AI integration domains. Deep mobile specialisation across Flutter/Dart (8+ years), native iOS (Swift/SwiftUI), and native Android (Java/Kotlin) — three platforms, all production-proven. Cross-platform experience spans Flutter (primary) and React Native/Expo (production — built and later migrated DeyChop from Expo to Flutter). Backend capability spans Spring Boot (Java) microservices, PHP, Dart server (Serverpod, Shelf, DartFrog), Firebase Cloud Functions (TypeScript/JavaScript), and containerised deployments via Docker. Database experience across PostgreSQL, MySQL, MongoDB, Firestore, and Supabase.

Led engineering teams of up to 10 developers — owning sprint planning, hiring, technical roadmap, end-to-end release cycles, and code review culture. Delivered production-grade applications across fintech, e-commerce, logistics, warehousing, and social commerce for international teams in Dubai, Australia, Canada, Europe, and Nigeria — including a platform with 500,000+ combined downloads. A fullstack engineer who ships entire multi-sided platforms solo by applying 12 years of experience across mobile, web, and backend with AI-assisted agentic workflows as a force multiplier. Effective as Engineering Lead, Technical Lead, Senior IC, Fullstack Engineer, or AI Integration specialist.

PROFESSIONAL EXPERIENCE

DeyChop — Food Delivery & Logistics Platform

Senior Software Engineer — Fullstack · Mobile · Web · Backend

2025 – 2026 | Nigeria | Remote | Contract

- **4-App Fullstack Platform:** Delivered Customer, Vendor, and Rider mobile apps (Flutter) plus Admin Web dashboard (Flutter Web) on one unified Dart codebase across all four apps with ~31 backend feature modules.
- **Platform Migration (Expo to Flutter):** Originally built in Expo (React Native) + PHP. Architected and executed full migration to Flutter — delivering superior performance, native iOS/Android fidelity, and a single Dart frontend codebase.
- **Backend Migration (PHP to Serverpod):** Designed and executed backend migration from PHP to Serverpod (Dart)/PostgreSQL — achieving a single-language fullstack with type-safe RPC, shared models, REST + RPC protocol parity, and Docker-containerised deployment.
- **Production DB Migration Tooling:** Built custom JSON-driven migration scripts migrating a live PHP/MySQL production database into Serverpod/PostgreSQL with dynamic schema mapping, seeding, and backward-compatibility preservation.
- **Customer App:** Geo-tagged ordering, Google Maps integration, gift-a-meal feature, real-time order tracking, favourites, chat, and seamless checkout.
- **Vendor App:** Real-time order acceptance/processing/rejection, menu + addons management, business hours/timetable scheduling, online status, and fulfilment orchestration.
- **Rider App:** Route-based delivery matching, auto-assignment from multi-user dispatch, real-time GPS tracking, state machine logic (pickup → transit → delivery) with confirmation codes, and earnings management.
- **Admin Web Dashboard:** Financials, KYC/approval workflows, catalog config, dispute resolution, and analytics — with role-based access and self-healing session verification against local-storage spoofing.
- **Automated Payout Engine:** Idempotent wallet processing for platform, vendor, and rider payouts — funding, withdrawals, earnings breakdowns, and payout requests.
- **Promo & Monetization:** Discount code engine (applied codes, auto-resolution for universal carts) and vendor ad-bidding system for premium banner placements.
- **Wallet & Payments:** Paystack-powered wallet system across all roles — funding, withdrawals, escrow-style delivery payment, and confirmation-code release.

- **Platform Engineering:** Transactional HTML email templates with order-status admin notifications, Serverpod Swagger API documentation, and Firebase/Google Analytics instrumentation for behavioural tracking.

Faadaaka — Credit E-Commerce Platform

Senior Software Engineer — Fullstack Dart

2026 | Nigeria | Remote | Contract

- **Credit Commerce App:** Flutter e-commerce app — product catalog, search, cart, orders, dynamic credit assessment, and wallet-driven checkout with Paystack payments.
- **Secure Transactions:** Transaction PIN flows, Paystack inline payments, wallet management pages, and reCAPTCHA-secured sensitive actions.
- **Backend Architecture:** Dart/Serverpod handles real-time credit scoring, repayment tracking, and full order lifecycle management. Fully containerised deployment using Docker.

Eyewa — Eyewear E-Commerce Platform (500,000+ Downloads)

Engineering Lead — Mobile · Backend · AI

Jan 2022 – Apr 2026 | Dubai | Remote | Full-Time

- **Engineering Leadership:** Led a cross-functional mobile engineering team owning sprint planning, hiring decisions, technical roadmap, coding standards, and code review culture across iOS and Android.
- **Greenfield Architecture:** Designed and delivered Eyewa's flagship Flutter e-commerce app from scratch, scaling to 500,000+ combined downloads.
- **Native iOS & Android Engineering:** Wrote production Swift in Xcode (integrating BytePlus AR VTO SDKs via UIKit/AVFoundation, Method Channels, PlatformViews) and production Java/Kotlin in Android Studio (hardware camera APIs, biometric auth, Gradle configs).
- **Virtual Try-On (VTO) Impact:** Authored custom Flutter plugins wrapping native iOS/Android SDKs and rolled out VTO features across PLP, PDP, and Homepage, lifting mobile user engagement by 25%.

Wiremoney & Wyr — International Remittance Platforms

Senior Software Engineer — Fintech Mobile

2022 – 2025 | Australia & Canada | Remote | Contract

- Built two cross-border remittance platforms simultaneously (Australia & Canada to Nigeria) with encrypted transaction flows, secure storage, and compliance-aware data handling.

INDEPENDENT DEVELOPMENT & OPEN SOURCE

Self-Directed Fullstack & AI Architecture (2025 – Present)

- **TallaChat** (github.com/mtellect/talla_chat · ~67k lines): Fullstack TypeScript/Dart monorepo — social commerce marketplace with Paystack escrow wallet (funds held in "Pending" until escrow conditions met), Firebase Cloud Functions (TypeScript) backend, atomic Firestore transactions, decoupled WalletService/CartService/ShopService/EscrowService orchestrated by OrderService, and a shared pure-Dart package guaranteeing type-safe DTOs across the network boundary. Flutter frontend with Auto Route + Provider.
- **Inbound WMS** (github.com/mtellect/inbound_wms · ~16k lines): Cross-platform Flutter warehouse management system — RBAC (Manager/Supervisor/Worker workflows), Supabase Auth + PostgreSQL RLS, CSV/XLSX bulk PO imports with vendor enforcement, barcode scanning receiving sessions, and a discrepancy engine. Containerised deployment.
- **vto_face_metrics** (github.com/mtellect/vto_face_metrics · Published Package): UI-agnostic on-device face analysis using MediaPipe FaceMesh (468 landmarks) via the Tasks SDK — face shape classification (oval/round/square/heart/diamond), physical measurements, jaw/forehead/cheekbone widths, and pupillary distance. Pure Dart geometry engine with zero UI dependencies.
- **AI-Accelerated Engineering:** Shipped a production multi-sided platform solo (DeyChop) using agentic AI workflows — local LLM pipelines (Ollama + Qwen2.5-Coder) plus Claude, Gemini, and OpenAI APIs for multi-step code generation, planning, and self-validation.

CORE TECHNOLOGIES & SKILLS

Mobile:	Flutter (8+ yrs), Dart, Swift/SwiftUI (iOS), Java/Kotlin (Android), Flutter Web, Platform Channels, React Native/Expo
Backend:	Spring Boot (Java), Serverpod (Dart), Shelf, DartFrog, PHP/Laravel, Firebase Cloud Functions (TS/JS), REST APIs, Type-Safe RPC
Databases:	PostgreSQL, MySQL, MongoDB, Firestore, Supabase, Hive, SQLite
AI & LLM Workflows:	Agentic Workflows, Ollama, Qwen2.5-Coder, Claude API, OpenAI API, Gemini API, Prompt Engineering
DevOps & CI/CD:	Docker, GitHub Actions, Codemagic, Bitrise, Firebase (GCP)
Architecture/Leadership:	Clean Architecture, MVVM, Microservices, Sprint Planning, Team Hiring, Code Reviews, Release Management

KEY ACHIEVEMENTS

- **Solo Multi-App Delivery:** Shipped DeyChop solo end-to-end — backend, mobile, and web — using AI-assisted agentic workflows, delivering a 4-app production platform (Customer/Vendor/Rider/Admin Web) on a unified Dart/Serverpod stack.
- **Eyewa Native VTO & Scale:** Led engineering team at Eyewa for 4 years, scaling to 500,000+ combined downloads and driving a 25% mobile engagement lift via Native VTO Swift and Java/Kotlin platform channels.
- **Fullstack Versatility:** Delivered production systems across Spring Boot microservices, Dart/Serverpod, and Firebase Cloud Functions (TypeScript) — all with Docker containerisation.

EDUCATION

Bachelor of Engineering (B.Eng.)

Electrical and Electronics Engineering

Michael Okpara University of Agriculture, Umudike (MOUUAU) | 2011 – 2016
