## PROFESSIONAL SUMMARY

Senior Mobile Engineer with 8+ years of production experience across Flutter, native iOS (Swift/SwiftUI), and native Android (Java/Kotlin) — three platforms, all proficient, all shipped to production. Native iOS work spans Swift, SwiftUI, UIKit, AVFoundation, Xcode, biometric APIs, and the full App Store pipeline — written and debugged directly, not via wrappers. Native Android work spans Java, Kotlin, the Android SDK, Gradle, Jetpack, and the full Play Store pipeline. Flutter serves as the cross-platform delivery layer that unifies them, with 8+ years of production Flutter experience since its earliest releases. Brings fullstack Dart capability across client (Flutter/Web) and server (Serverpod, Shelf, DartFrog), LLM/agent AI integration (Claude, Gemini, OpenAI, Ollama), Flutter plugin authoring from native SDKs, and end-to-end CI/CD ownership. Delivered high-scale apps across fintech, e-commerce, logistics, warehousing, and AI domains for international teams in Dubai, Australia, Canada, Europe, and Nigeria — including a platform with 500,000+ combined downloads. Effective as Technical Lead, Senior IC, Fullstack Engineer, or AI Integration specialist.

## PROFESSIONAL EXPERIENCE

### Senior Mobile Engineer — Flutter · iOS · Android · Internal Tools

[Eyewa — Eyewear E-Commerce Platform \(500,000+ Downloads\)](#)

Jan 2022 — Apr 2026 (4 yrs) · Dubai · Remote · Full-Time

- **Greenfield E-Commerce App:** Designed and delivered Eyewa's flagship Flutter e-commerce app from scratch across iOS and Android — owning full engineering lifecycle from architecture to App Store/Play Store release. App scaled to 500,000+ combined downloads.
- **Native iOS Engineering (Swift — Proficient):** Wrote production Swift directly in Xcode — integrating BytePlus VTO SDKs via UIKit and AVFoundation, authoring MethodChannels and PlatformViews, implementing biometric authentication, managing provisioning profiles, and owning the full App Store release pipeline. Prototyped VTO solutions (Banuba, DesignHub) using native Swift rendering. Production Swift engineering — not wrapper configuration.
- **Native Android Engineering (Java/Kotlin — Proficient):** Wrote production Java and Kotlin in Android Studio — integrating hardware camera APIs, biometric auth, and native SDKs via platform channels and PlatformViews, managing Gradle build configs, and owning the full Play Store release pipeline including signing and versioning.
- **Flutter Plugin Engineering:** Authored reusable Flutter plugins wrapping native iOS (Swift) and Android (Java/Kotlin) SDKs — AR, camera, payment, and analytics capabilities packaged as standalone, publishable libraries.
- **WMS — Warehouse Management System:** Built an internal Flutter app for warehouse operations — integrating Zebra scanner hardware for barcode scanning to record and process inbound stock, Transfer Orders, Transfer Journal Orders, and GRN (Goods Received Note) workflows. Enabled real-time inventory tracking across Eyewa's warehouse infrastructure.
- **Eyewa Delivery App:** Developed an internal Flutter logistics app used by Eyewa's delivery operations team to manage last-mile delivery workflows, order dispatch, and real-time delivery status tracking.
- **Full-Funnel Ownership:** Architected end-to-end cart, checkout, and order systems; implemented crash monitoring (Firebase Crashlytics, Mixpanel, MS Clarity, Amplitude) and comprehensive widget tests guaranteeing 99%+ checkout reliability.
- **VTO Feature Deployment:** Rolled out Virtual Try-On across PLP, PDP, and Homepage — lifting mobile engagement by 25% overall.
- **Deep Linking & Growth:** Dynamic deep-link routing via Amplitude and Branch.io for user acquisition and re-engagement campaigns.
- **CI/CD & Publishing:** Automated release pipelines via Codemagic and GitHub Actions — provisioning, signing, versioning, and deployment to both stores.

Senior Software Engineer — Fullstack Dart

DeyChop — Food Delivery Platform

2025 – 2026 · Nigeria · Remote · Contract

- **Multi-App Ecosystem:** Architected a modular Flutter delivery ecosystem — dedicated apps for Customers, Vendors, and Riders — all live on App Store and Google Play.
- **Route-Based Delivery:** Built a 'delivery tag' system matching packages to riders on a given route — real-time coordination with state machine logic managing pickup, transit, and delivery states.
- **Fullstack Dart:** Backend API built with Serverpod — type-safe RPC, shared models between Flutter client and Dart server, unified CI pipeline.

Senior Software Engineer — Fullstack Dart

Faadaaka — Credit E-Commerce Platform

2026 · Nigeria · Remote · Contract

- **Credit Commerce App:** Designed a Flutter e-commerce app where purchases are managed by a dynamic credit-score engine supporting partial and full repayment scheduling.
- **Risk & Repayment Backend:** Dart/Serverpod backend handles real-time credit assessment, repayment tracking, and order lifecycle management.

Senior Software Engineer — Fintech

Wiremoney · Wyrri — International Remittance Platforms

2022 – 2025 · Australia & Canada · Remote · Contract

- **Dual Fintech Delivery:** Simultaneously built and maintained two cross-border remittance apps — Nigeria↔Australia (Wiremoney) and Nigeria↔Canada (Wyrri) — each achieving 1,000+ App Store and Google Play downloads.
- **Secure Payment Architecture:** Encrypted transaction flows, secure storage, and compliance-aware data handling for international financial regulations.
- **Full Release Pipeline:** CI/CD, app signing, versioning, and publishing for both iOS and Android across both products.

Software Engineer — Mobile

SARL GLOBA | Playground — Children's EdTech

2021 – 2022 · France · Remote · Contract

- **Rich Media App:** Built and shipped a Flutter application featuring real-time Video/Voice calling (WebRTC) and embedded JavaScript games — cross-platform iOS and Android.
- **Cross-Platform Publishing:** End-to-end iOS and Android publishing.

Applied AI & Independent Development

Self-Directed · AI Integration & Architecture

2025 – Present · Independent

- **Agentic Workflows:** Configured local LLM pipelines (Ollama + Qwen2.5-Coder on Mac M1) for multi-step code generation, planning, and self-validation.
- **AI Package Engineering:** Architected and published reusable AI-driven Flutter packages (e.g., `ai_face_analyzer`) with typed input/output contracts and automated evaluation.
- **LLM-Powered Conversational Commerce:** Natural-language shopping flows — LLMs given typed access to e-commerce datasets (variants, swatches, categories) enabling product discovery, cart management, and checkout via conversation.
- **Prompt Engineering:** Structured system/user role separation, schema-first output constraints, few-shot anchoring, and quality benchmarking across Claude, Gemini, and OpenAI.

CORE TECHNOLOGIES & SKILLS

Flutter & Cross-Platform

|                  |      |             |                 |                   |        |
|------------------|------|-------------|-----------------|-------------------|--------|
| Flutter (8+ yrs) | Dart | Flutter Web | Flutter Plugins | Platform Channels | Pigeon |
|------------------|------|-------------|-----------------|-------------------|--------|

Native iOS

|       |         |       |              |       |         |

| Zebra Scanner SDK       | NFC            | Biometrics | Camera APIs          | WebRTC             | AR/VTO Integration  |

KEY ACHIEVEMENTS

- ★ Scaled Eyewa to 500,000+ combined App Store & Google Play downloads — 4 years as lead engineer owning Flutter, native iOS (Swift), and native Android (Java/Kotlin) end-to-end.
- ★ 25% mobile engagement lift through Native VTO — Swift and Java/Kotlin platform channels bridging BytePlus AR SDKs into a Flutter production app at scale.
- ★ Built Eyewa's internal WMS app integrating Zebra scanner hardware for real-time warehouse inventory management — inbound stock, Transfer Orders, Transfer Journals, and GRN workflows.
- ★ Delivered 4 international fintech apps across Australia, Canada, and Nigeria concurrently — each achieving 1,000+ store downloads with secure, compliance-aware payment architecture.
- ★ Built and shipped agentic LLM workflows (Claude, Gemini, OpenAI, Ollama) — conversational commerce, AI package engineering, and local model orchestration in production.
- ★ Fullstack Dart delivery: Flutter frontend + Serverpod backend as a unified single-language stack — type-safe APIs, shared models, and unified CI/CD across client and server.
- ★ Authored reusable Flutter plugins (Swift + Java/Kotlin) wrapping complex native SDKs — AR, camera, payment, and Zebra scanner capabilities as publishable packages.
- ★ Defined CI/CD standards, coding conventions, and release workflows across multiple international remote teams using GitHub Actions, Codemagic, and Bitrise.

EDUCATION

**Bachelor of Engineering**  
 Michael Okpara University of Agriculture, Umudike (MOUAAU)  
 2011 – 2016

ROLE ADAPTABILITY

**Senior / Lead Mobile Engineer:** Flutter, native iOS (Swift/SwiftUI), and native Android (Java/Kotlin) — all three proficient and production-proven. Plugin authoring, SDK integration, platform channels, and full App Store/Play Store release ownership.

**Fullstack Engineer (Dart):** End-to-end Dart stacks — Flutter/Web frontend + Serverpod/Shelf/DartFrog backend — with SQL, Firebase, Supabase, and Appwrite data layers. Single-language, type-safe full-stack delivery.

**Technical Lead / Architect:** 4-year lead ownership at Eyewa — greenfield architecture, coding standards, code review culture, and cross-functional stakeholder communication.

**AI Integration Engineer:** LLM-powered features in production (Claude, Gemini, OpenAI), local agentic pipelines (Ollama), prompt engineering, structured output contracts, and AI-driven package development.

**IoT / Hardware Integration:** Zebra scanner SDK integration for warehouse management, NFC, biometrics, hardware camera APIs, and AR/VR SDK integration via native platform channels.
