PROFESSIONAL SUMMARY

Senior Software Engineer and Engineering Lead with 10+ years of experience spanning mobile, backend, fullstack, and AI integration domains. Deep mobile specialisation across Flutter/Dart, native iOS (Swift/SwiftUI), and native Android (Java/Kotlin) — three platforms, all production-proven. Backend capability spans Spring Boot (Java) microservices and APIs, Dart server (Serverpod, Shelf, DartFrog), Firebase Cloud Functions (TypeScript/JavaScript), and containerised deployments via Docker. Database experience across PostgreSQL, MySQL, MongoDB, Firestore, and Supabase. Led engineering teams of up to 10 developers — owning sprint planning, hiring, technical roadmap, end-to-end release cycles, and code review culture. Delivered production-grade applications across fintech, e-commerce, logistics, warehousing, and social commerce for international teams in Dubai, Australia, Canada, Europe, and Nigeria — including a platform with 500,000+ combined downloads. Effective as Engineering Lead, Technical Lead, Senior IC, Fullstack Engineer, or AI Integration specialist.

PROFESSIONAL EXPERIENCE

Engineering Lead — Mobile · Backend · AI

[Eyewa — Eyewear E-Commerce Platform \(500,000+ Downloads\)](#)

Jan 2022 – Apr 2026 (4 yrs) · Dubai · Remote · Full-Time

- Engineering Leadership:** Led a cross-functional mobile engineering team — owning sprint planning, hiring decisions, technical roadmap input, coding standards, and code review culture across iOS and Android platforms.
- Greenfield Architecture:** Designed and delivered Eyewa's flagship Flutter e-commerce app from scratch — owning full engineering lifecycle from architecture through App Store/Play Store release. Scaled to 500,000+ combined downloads.
- End-to-End Release Ownership:** Oversaw complete app release cycles — provisioning, code signing, CI/CD pipelines (Codemagic, GitHub Actions), phased rollouts, and post-release monitoring across both stores.
- Native iOS Engineering (Swift):** Wrote production Swift directly in Xcode — integrating BytePlus VTO SDKs via UIKit and AVFoundation, authoring MethodChannels and PlatformViews, implementing biometric authentication, and managing provisioning profiles.
- Native Android Engineering (Java/Kotlin):** Wrote production Java and Kotlin in Android Studio — integrating hardware camera APIs, biometric auth, and native SDKs via platform channels and PlatformViews, managing Gradle build configs.
- Flutter Plugin Engineering:** Authored reusable Flutter plugins wrapping native iOS (Swift) and Android (Java/Kotlin) SDKs — AR, camera, payment, and analytics capabilities.
- Internal Tools — WMS:** Built warehouse management system integrating Zebra scanner hardware for inbound stock, Transfer Orders, Transfer Journals, and GRN workflows.
- Internal Tools — Delivery App:** Built internal Flutter logistics app managing last-mile delivery workflows, order dispatch, and real-time delivery status tracking.
- Observability & Reliability:** Implemented crash monitoring stack (Firebase Crashlytics, Mixpanel, MS Clarity, Amplitude) and comprehensive widget tests — 99%+ checkout reliability.
- VTO Feature Deployment:** Rolled out Virtual Try-On across PLP, PDP, and Homepage — lifting mobile engagement by 25%.
- Deep Linking & Growth:** Dynamic deep-link routing via Amplitude and Branch.io.

Senior Software Engineer — Fullstack · Mobile · Backend

DeyChop — Food Delivery & Logistics Platform

2025 – 2026 · Nigeria · Remote · Contract

- **Sole Architect & Engineer:** Designed and built a complete food delivery ecosystem — three Flutter apps (Customer, Vendor, Rider) plus Dart/Serverpod backend, all live on App Store and Google Play.
- **Customer App:** Geo-tagged ordering, Google Maps integration, gift-a-meal feature, real-time order tracking, and seamless checkout.
- **Vendor App:** Real-time order acceptance, processing, and rejection workflows with menu management and fulfilment orchestration.
- **Rider App:** Route-based delivery matching, real-time GPS tracking, state machine logic (pickup → transit → delivery), and earnings management.
- **Wallet & Payments:** Paystack-powered wallet system — funding, withdrawals, and payment flows across all three user roles.
- **Backend:** Serverpod (Dart) with type-safe RPC, shared models, PostgreSQL, and Docker-containerised deployment.

Senior Software Engineer — Fullstack Dart

Faadaaka — Credit E-Commerce Platform

2026 · Nigeria · Remote · Contract

- **Credit Commerce App:** Flutter e-commerce app with dynamic credit-score engine supporting partial and full repayment scheduling.
- **Backend:** Dart/Serverpod handles real-time credit assessment, repayment tracking, and order lifecycle management. Containerised with Docker.

Senior Software Engineer — Fintech · Mobile

Wiremoney · Wyrri — International Remittance Platforms

2022 – 2025 · Australia & Canada · Remote · Contract

- **Dual Fintech Delivery:** Built two cross-border remittance apps simultaneously — Nigeria↔Australia (Wiremoney) and Nigeria↔Canada (Wyrri) — each achieving 1,000+ downloads.
- **Secure Payment Architecture:** Encrypted transaction flows, secure storage, and compliance-aware data handling for international financial regulations.
- **Full Release Pipeline:** CI/CD, app signing, versioning, and publishing for both iOS and Android across both products.

Software Engineer — Mobile

SARL GLOBA | Playground — Children's EdTech

2021 – 2022 · France · Remote · Contract

- **Rich Media App:** Flutter application with real-time Video/Voice calling (WebRTC) and embedded JavaScript games — cross-platform iOS and Android.

Independent Development — AI, Backend & Open Source

Self-Directed · Fullstack & AI Architecture

2025 – Present · Independent

- **TallaChat (github.com/mtellect/talla_chat):** Fullstack TypeScript/Dart monorepo — social commerce marketplace with escrow wallet (Paystack), Firebase Cloud Functions (TypeScript) backend, atomic Firestore transactions, and decoupled service architecture (WalletService, CartService, EscrowService). Flutter frontend with Auto Route and Provider.
- **Inbound WMS (github.com/mtellect/inbound_wms):** Cross-platform Flutter warehouse management system — RBAC, barcode scanning, bulk PO import, discrepancy engine. Backend: Supabase (PostgreSQL + RLS). Containerised deployment.
- **Agentic AI Workflows:** Local LLM pipelines (Ollama + Qwen2.5-Coder) for multi-step code generation, planning, and self-validation. LLM-powered features in production using Claude, Gemini, and OpenAI APIs with typed contracts and structured outputs.
- **vto_face_metrics (github.com/mtellect/vto_face_metrics):** Published Flutter package for face metric computation and automated categorisation.

CORE TECHNOLOGIES & SKILLS

Mobile

Flutter (8+ yrs)	Dart	Swift/SwiftUI	Java/Kotlin (Android)	Flutter Web	Platform Channels
------------------	------	---------------	-----------------------	-------------	-------------------

Backend

Spring Boot (Java)	Serverpod (Dart)	Shelf/DartFrog	Firebase Cloud Functions (TS/JS)	REST APIs	Microservices
--------------------	------------------	----------------	----------------------------------	-----------	---------------

Databases

PostgreSQL	MySQL	MongoDB	Firestore	Supabase	Hive / SQLite
------------	-------	---------	-----------	----------	---------------

DevOps & Cloud

Docker	GitHub Actions	Codemagic	Bitrise	Firebase (GCP)	CI/CD Pipelines
--------	----------------	-----------	---------	----------------	-----------------

AI & LLM

Claude API	OpenAI API	Gemini API	Ollama	Prompt Engineering	Agentic Workflows
------------	------------	------------	--------	--------------------	-------------------

State Management

Provider	Riverpod	BLoC	GetIt	Redux
----------	----------	------	-------	-------

Payments & Fintech

Paystack	Flutterwave	Stripe	Apple Pay	Google Pay	Escrow Systems
----------	-------------	--------	-----------	------------	----------------

Architecture

Clean Architecture	MVVM	Microservices	Modular Design	DRY/SOLID	Plugin Architecture
--------------------	------	---------------	----------------	-----------	---------------------

Leadership

Sprint Planning	Team Hiring	Roadmap Input	Code Reviews	Release Management	Mentorship
-----------------	-------------	---------------	--------------	--------------------	------------

Languages

Dart	Java	Kotlin	Swift	TypeScript	JavaScript
------	------	--------	-------	------------	------------

KEY ACHIEVEMENTS

- ★ Led engineering team at Eyewa for 4 years — sprint planning, hiring, roadmap, and full release cycle ownership scaling the platform to 500,000+ combined App Store & Google Play downloads.
- ★ Built DeyChop solo — complete food delivery ecosystem: 3 live Flutter apps, Paystack wallet, Google Maps, real-time GPS tracking, and Dart/Serverpod backend containerised with Docker.
- ★ Delivered 4 international fintech apps across Australia, Canada, and Nigeria — secure payment architecture, compliance-aware data handling, 1,000+ downloads each.
- ★ Built and shipped LLM-powered features in production (Claude, Gemini, OpenAI) — conversational commerce, agentic workflows, and AI package engineering.
- ★ Fullstack delivery across 3 backend stacks: Spring Boot (Java) microservices, Dart/Serverpod, and Firebase Cloud Functions (TypeScript) — all with Docker containerisation.
- ★ 25% mobile engagement lift at Eyewa through Native VTO — Swift and Java/Kotlin platform channels bridging BytePlus AR SDKs into a Flutter production app.
- ★ Authored reusable Flutter plugins (Swift + Java/Kotlin) wrapping complex native SDKs — AR, camera, payment, and scanner capabilities as publishable packages.

EDUCATION

Bachelor of Engineering

Michael Okpara University of Agriculture, Umudike (MOUUAU)

2011 – 2016

ROLE ADAPTABILITY

Engineering Lead / Technical Lead: Led teams of up to 10 engineers — sprint planning, hiring, roadmap, release cycles, code reviews, and cross-functional stakeholder communication.

Senior Mobile Engineer: Flutter, native iOS (Swift/SwiftUI), and native Android (Java/Kotlin) — all three proficient and production-proven across 20+ shipped applications.

Senior Backend Engineer: Spring Boot (Java) microservices and APIs, Dart server (Serverpod/Shelf/DartFrog), Firebase Cloud Functions (TypeScript/JavaScript), Docker containerisation, PostgreSQL, MySQL, and MongoDB.

Fullstack Engineer: End-to-end delivery across mobile (Flutter/iOS/Android), web (Flutter Web), and backend (Spring Boot, Dart, TypeScript/Firebase) — single engineer capable of owning the full stack.

AI Integration Engineer: LLM-powered features in production (Claude, Gemini, OpenAI), local agentic pipelines (Ollama), prompt engineering, and AI-driven package development.
